The brand/purpose and made in-country of the spare parts, machinery can be chosen by the client is one of the exclusive options provided by the Fixwell Automations."

VFD

Variable Frequency Drive (VFD) is a controller that drives the electric motor by varying the frequency and voltage. VFD is used to reduce energy consumption and costs, better productivity through process..

Servo Drives

Servo systems are automated controls which find their application in CNC Machines, Automation and Robotics. Servo drives offer advantages such as superior positioning, speed and motion.

PLC

Variable Frequency Drive (VFD) is a controller that drives the electric motor by varying the frequency and voltage. VFD is used to reduce energy consumption and costs, better productivity through process.

HMI

Variable Frequency Drive (VFD) is a controller that drives the electric motor by varying the frequency and voltage. VFD is used to reduce energy consumption and costs, better productivity through process.

Industrial Machinery PCB

Variable Frequency Drive (VFD) is a controller that drives the electric motor by varying the frequency and voltage. VFD is used to reduce energy consumption and costs, better productivity through process.
